D2.1: Database content of hubs 'actors

Document Summary

Deliverable Title: **Database content of hubs 'actors**

Version: 1

Deliverable Lead: INOVISA

Related Work package: WP2

Author(s): **Adrien Guichaoua, András Verger, Luís Mira da Silva, Maria Cordeiro**

Contributor(s): Milica Trajkovic

Communication level:
- **CO Confidential, only for members of the consortium (including the Commission Services)**

Project Number:7727053

Grant Agreement Number: **7727053**

Programme: **NEFERTITI**

Start date of Project: **January, 1, 2018**

Duration: **4 years**

Project coordinator**: Adrien Guichaoua**

Abstract

NEFERTITI Programme promotes the creation of interactive thematic networks related to the agriculture sector to promote knowledge, learning and the adoption of innovative techniques through the exchange of information between different actors and live demonstrations..

Means of verification

Means of verification

The database content of hubs 'actors arises as result of task 2.1: "Shaping hubs - regional and national networks of demo-farmers".

The NEFERTITI project is establishing 10 interactive thematic networks, that bring together 45 regional clusters – hubs – of demo-farmers and other involved actors (advisors, NGOs, industry, education, researchers and policy makers), in 17 countries across Europe.

In order to set up and shape the 45 regional hubs of demo-farmers and other innovation actors (T2.1), it was important to ensure the involvement of relevant regional and national actors and stakeholders in the creation of hubs. Task 2.1. is identifying and selecting existing actors and stakeholders of national and regional networks and projects (such as OGs) on NEFERTITI topics. This process relies on online questionnaires, to be filled in by demo-farmers and other innovation actors and results in the database content of hubs' actors.

Given that hubs' actors might be interchangeable throughout the duration of the project and that the membership of each hub will be more clearly defined with the effective start of the demo-activities, in 2019, the identification and selection of hubs' actors is a continuous process. Therefore, the resulting database content of hubs actors is an evolving document.

The means of verification for this milestone consist of an evolving table, wich collects information on the hubs' actors and some relevant statistics:

D2.1. Database
content of hubs' actor

THIS PROJECT HAS RECEIVED FUNDING FROM THE **EUROPEAN UNION'S HORIZON 2020 RESEARCH AND INNOVATION PROGRAMME** UNDER GRANT AGREEMENT N. 772705
